

To fight and eliminate the dental plaque and the tartar, the bad breath and the gingivitis infections

Few months in the dog's life and already, the bacteria start to form a dental plaque.

After few years, the teeth and the gums suffer and the general health can deteriorate. This is now possible to avoid that with **ORAL CARE, 100% naturel**, a combination of specific brown algae known to reduce and eliminate bacteria and the powder of oyster's shells to add an efficient mechanical action.

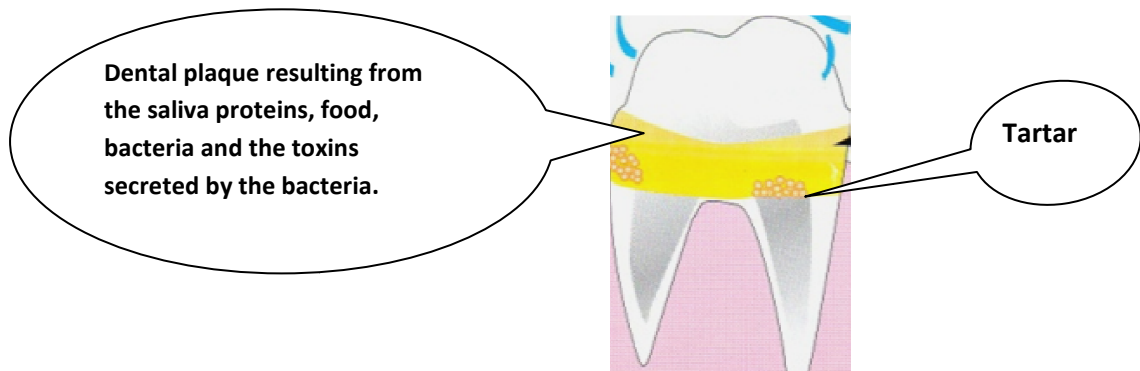

**BECAUSE YOU TAKE CARE OF THEM!**

**DOGS AND CATS**

**You really take care of them! For their teeth and their gums,**

## **YOU WANT TO AVOID THIS!**

**It is confirmed that, as soon as the the tooth grows, the dental plaque appears.**

**If it is not taken care of, it mineralizes and the tartar appears.**

**Your Pet suffers from his gums, generates more saliva and it's breath becomes foul.**

**This problem is quite serious. It can produce a refusal of food because of the pain, the teeth can work loose due to the receding gums and fall, a dental abscess can occur.**

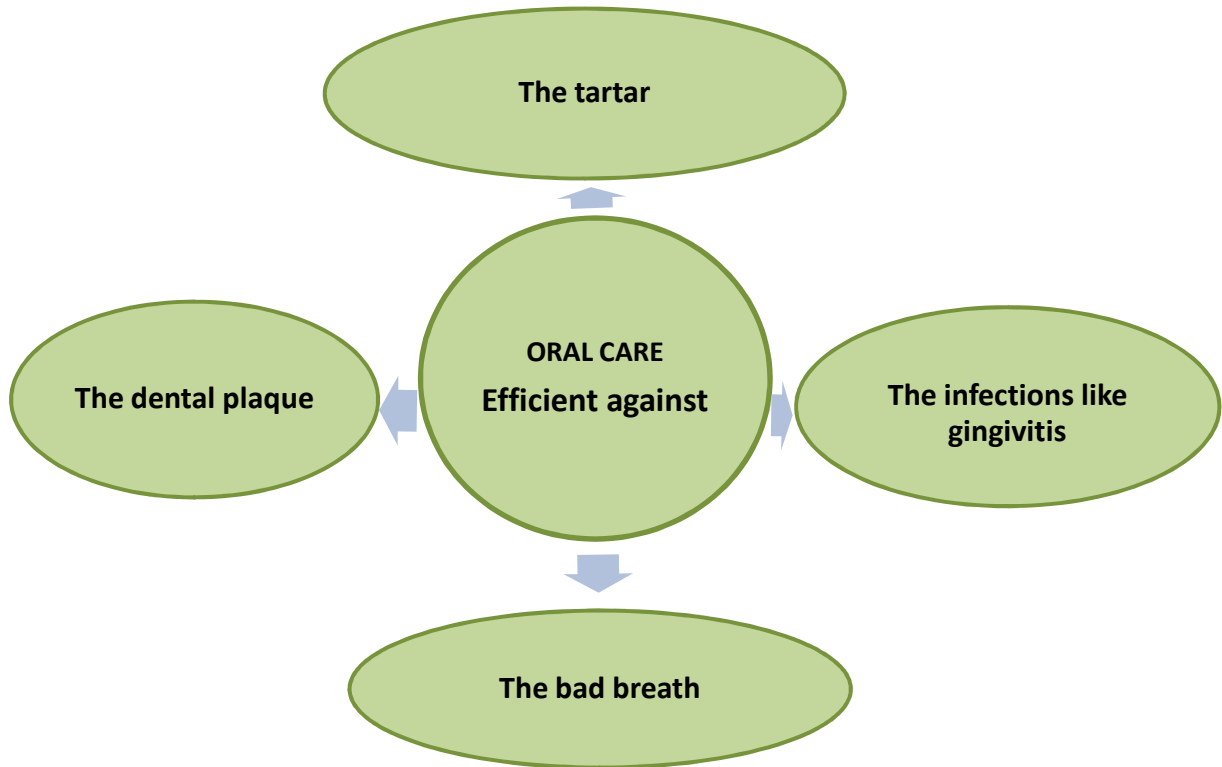

**The general health is also modified with an important tiredness, some fever, some kidneys problems, liver and heart problems because of a general infection caused by some dangerous bacteria which go through the blood.**

**Consequently, this is very important to maintain an early oral hygiene.**

**ORAL CARE !** Is the efficient answer to this need.

**This is very easy, just one appropriate dosage depending of the Pet's weight.**

# THE “ORAL CARE” ACTION

**ORAL CARE** is a combined result of an algae, the **Fucus Vesiculosus** of the Fucans type, a brown algae, which has the particularity to slow and to eliminate the invasion of the streptococci (It also softens the dental plaque and the tartar) and the oysters shells finely grounded which give a complementary action to eliminate the tartar residues. This combined action reduces and eliminates the bad breath, the dental plaque, the tartar and delay the formation of decays.

These two components are totally natural, without coloring or additives according official regulations. They are picked up all year round on the French Atlantic Ocean coast. **ORAL CARE** does not contain any genetically modified organism (GMO) and is not made from either. It is fully guaranteed that all ingredients in ORAL CARE have never been modified through Gamma Rays.

**With ORAL CARE, this is possible to reduce the eventual teeth brushing.**

The dogs and the cats recover healthy teeth with no strain, just by loving their everyday food.

In case of heavy tartar, it is advisable to check with the veterinary the necessity of scaling the teeth before starting the use of ORAL CARE.

## APPLICATIONS:

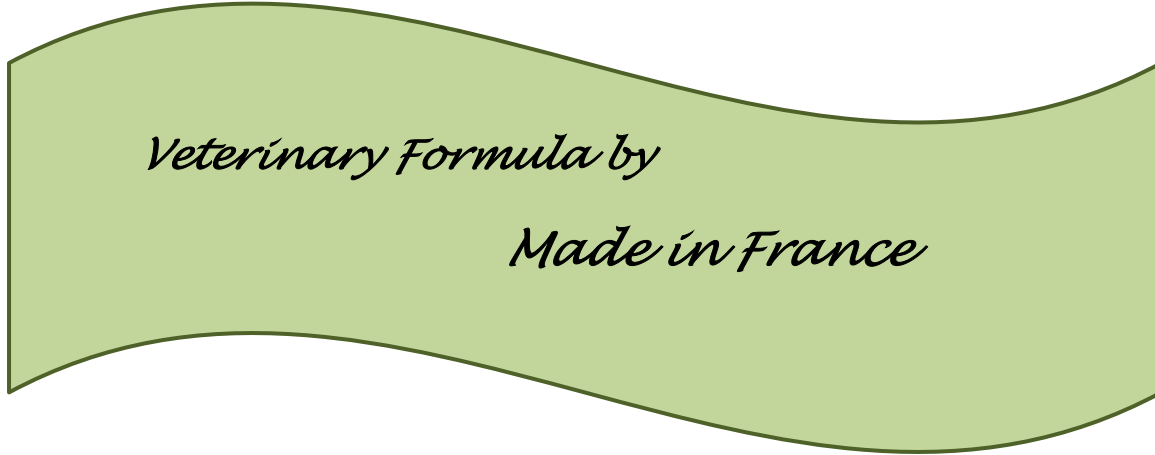

- ✓ Fights against the formation of the dental plaque
- ✓ Avoids the bad breath
- ✓ Eliminates tartar
- ✓ Decreases the risk of teeth problems and gingivitis
- ✓ Reduces the need to have the tartar removed
- ✓ Improves the mouth and teeth hygiene

It takes about 3 to 4 weeks to see a real change. The bad breath disappears and the tartar reduces considerably. Depending of the importance of the tartar, it takes about 8 weeks for a complete result on the dental plaque and the tartar.

**DOSAGES :** Small dogs and cats <10 kg 1/2 dosage spoon per day, medium breeds 10 to 25 kg 1 dosage spoon per day large breeds molossoids >25 kg 2 dosage spoon per day (1 spoon = 0.5ml).

**IMPORTANT :** For Pets who could have thyroid problems, it is advisable to check with your veterinary prior starting to use ORAL CARE.

**A 60g jar lasts about 5/6 months for a small dog or a cat.**

**COMPONENTS**

Fucus Vesiculosus (brown algae)	95%
Ostrea Edulis	} (finely ground 5% oysters' shells)
Crassostrea gigas	
Iodine	2 000mg/kg

**PHYSICAL AND CHEMICAL CHARACTERISTICS**

Aspect	Powder
Humidity	<15%
Size Grading	Freeze-drying
Storage	Dry and fresh
Color	Green chestnut
Durability	36 months
Material dries	85 – 91%
Size	40g or 200 g
